## FEATURES OF FORMATION OF CREATIVE THINKING IN LEGAL KNOWLEDGE

**Karimova Shakhzoda Sobitjonovna**

Student of Chirchik State Pedagogical Institute, Tashkent Region

**Abstract:** This article explains the idea of creative thinking in the legal field. The article shows how to improve development by increasing the number of professionals who can meet modern requirements and be creative in any field.

**Keywords:** Creativity, deep thinking, creative thinking, modernization, scientific method of thinking, tactical deep thinking, dialectical creativity.

### Introduction

During the years of independence, as one of the main principles of the development of legal education in our country, special attention was paid to the education of creative thinking professionals and their material and spiritual stimulation. As a result, a system of special research centers has been formed in order to establish in-depth academic groups in educational institutions specializing in the legal field, to increase their comprehensive intellectual potential. In order to increase the effectiveness of scientific and creative potential of young people with the ability to think creatively, it is increasingly important to radically improve the quality of legal education, in-depth teaching of foreign languages, computer science and modern legal sciences.

In order to improve the system of legal education in the country, in the context of the widespread introduction of the information environment on the basis of a creative approach created opportunities to develop a sustainable interest in research activities of legal professionals based on best international practices. The material and technical base, the base of normative and legal documents, which serve to nurture research capacity in the legal field on the basis of a creative approach and comprehensively improve the quality of research, have been radically updated. It is in the Action Strategy for the further development of the Republic of Uzbekistan to stimulate research and innovation, create effective mechanisms for the implementation of scientific and innovative achievements, the establishment of specialized scientific and

experimental laboratories, high technology centers and technology parks at higher education institutions and research institutes. are identified separately as priorities. Tasks in this area serve to scientificize the content of educational processes, the development of creative research activities of students.

The modern system of legal education requires further improvement of mechanisms for training research skills of future professionals on the basis of creative approaches and an innovative system of their implementation. In this regard, the development of research skills of specialists in the field of legal education on the basis of a creative approach plays a special role in creating innovations, creating intellectual resources for socio-economic development and expanding the opportunities for training competitive personnel. Therefore, the priority areas for improving the intellectual factors of training research capacity in legal professionals trained around the world have been identified. In this regard, scientific research plays an important role in developing the content and scientific-methodological base of training young competitive legal personnel, the development of non-standard scientific and practical solutions in the educational process on the basis of self-activation, motivation to learn new legal disciplines. In this regard, the training of research capabilities of future officers in higher legal education on the basis of a creative approach is of great scientific and practical importance.

Given the development of Eastern and Western philosophical thinking, it can be said

that the role and place of legal factors in the formation of human creative thinking cannot be denied. The intuitive worldview of legal professionals opens a wide way to form a scientific hypothesis about the development of this field. Imagination and fantasy also play a role in the creative work of legal professionals. But imagination and intuition remain only the means used at the mental limit, to assist the legal expert in making scientific discoveries. In fact, the manifestation of intuition plays a very important role in real events.

Human qualities greatly contribute to the successful performance of management functions: personal behavior and professional culture are of particular importance. Personal behavior includes patriotism, determination, initiative, courage, and so on. Second, the unique thinking style, creative skills, tactical and strategic thinking of the legal professionals will move the soldiers towards the common goal wisely.

Of particular importance in this regard are: activity in the social life of professionals; professional training, deep knowledge of their work, good preparation; love for their profession, responsible and creative attitude to work; moral purity, honesty, truthfulness, diligence, humility, decent behavior in daily life, in the family; organizational skills, efficiency, drive for innovation and progress, timely perception of everything and support for creative approaches and creative decisions; discipline, diligence, dedication, initiative, perseverance, self-control, perseverance, perseverance; politeness, high precision, prudence, fairness and respect for one's personal dignity, and so on.

Thus, the above professional and psychological abilities can also include: the presence of clear personal goals (purposefulness), creative thinking ability, intuition, appropriate use of stress, emotional balance, self-control, empathy, organizational sensitivity to active psychological influence, high level of accuracy, attentiveness, high professionalism, communication skills, ability to influence subordinates (teamwork), ability to solve creative problems (striving for success)

are the leading qualities of professionals. At present, the following tasks need to be addressed in legal education institutions: the desire to be a leader, self-confidence, willingness and responsibility to make decisions, perseverance and determination in achieving goals, correct understanding and evaluation of one's strengths, confidence in achieving goals, etc.

In the scientific and creative pursuits of legal servants, it is associated with a unique memory, contemplation and figurative imagination. Some people make completely new discoveries in science and art and often don't even know how to do it themselves. Thus, it is not possible to artificially understand how a new idea emerges in the scientific and creative research of legal professionals. Because a new idea is an original understanding, a personal point of view.

In short, rational and intuitive thinking differ in the development of the problem-solving process and the level of awareness in the formation of creative thinking of legal professionals. We also theoretically study the intellectual features of individual thinking in the activities of legal professionals, and with the growth of professional education, the professional personality of legal professionals grows in the process of effective professional training, which is realized in the interaction of individual features of intuitive thinking. will be. Thinking, its type, is very important for choosing the type of activity, however, this choice leaves its mark on intuitive thinking. That is, the characteristics of such practical activity shape a person's ability to think intuitively.
