Abstract: In this article, the problems of improving the Initial Military Office Professional Competence by educating the students the feeling of patriotism, the work that must be done to develop the initial competence by educating young people in the educational system the feeling of military patriotism, and the necessary measures, as well as the factors of formation of skills in the selection of professions

Keywords: military profession competency, "Military patriotism consortium", Priority direction of the strategy of action, Defense Doctrine, official competency, Armed Forces system, patriotism, combination of education and army, The spirit of national idea and ideology.

Introduction

Special attention is paid to the development of professional competence in educational institutions on the basis of modern knowledge, advanced foreign experience, wide introduction of information and communication technologies to the field of military education in the world. The development and assessment of the level of competency of schoolchildren at the international level is of strategic importance, modernizing the military education system, integrating into the requirements of the social environment, the introduction of state educational standards based on competitions, the development of advanced curricula that serve to improve the efficiency of the educational process in educational institutions.

Today, the national program of training of Personnel is the only educational complex that can provide continuous education to the younger generation and comprehensively cover the process of its upbringing. Each unit of the Buda educational system has a special place

and responsibility. The full implementation of the program, the achievement of the tasks set, is a link to the state and level of development of these joints, their mutual harmony.

Improvement of professional competence of training for the office in educational institutions modernization of the military educational system introduction of state educational standards based on the most advanced innovative approaches requires the introduction of modern pedagogical technologies into the educational process and the wide use of information and communication technologies to a new level of quality.

The issues of further development of the quality of education in schools, secondary education, the spirit of interest and confidence in the military in young people, Physical Culture, vocational training, vocational orientation are of great importance today.

Today, Education of young people in the military-patriotic spirit and Armed Forces Of The Republic Of Uzbekistan within the

framework of the implementation of the accepted conceptions on increasing the effectiveness of spiritual and educational work in the system, a wide range of work is being carried out to educate young people who are comprehensively developed, knowledgeable, loyal to the work of serving their people, as well as the motherland.

At the same time, the threats to national values, the culture and identity of the peoples, the ongoing attempts to absorb alien ideas remain one of the urgent tasks of the adoption of additional measures in this direction due to the fact that young people remain the weakest in the conditions of rapid development of globalization processes.

At present, mass media plays an important role in the upbringing of young people in the sense of love of the native land, where they are born and live, as well as in the sense of military patriotism.

At present, the role of Internet sources and media(mass media) information in social life is becoming increasingly strengthened and becomes the main factor shaping the political level of the mirror of the development of society, the consciousness of people and youth, the outlook. Now it is impossible to imagine the conceptions of a Democratic state, free civil society without reforms in the information sphere.

It is known that the Internet Network, which appeared in the second half of the last century, has made a radical turn in the field of information. Now, the preservation of traditional media in its position in the age of Information Technology has become closely related in many ways to the opportunities of the global network.

In this regard, our compatriot emphasized "...today, in the process of forming a National Information System, the widespread use of the Internet and other global information systems is especially important. To achieve this is crucial

for the development of the country in the 21st century", -those who called for productive use of the opportunities created [1].

Of course, these sources of information are important in expanding the outlook of the younger generation and increasing their knowledge. It should also be noted that without denying the positive aspects of media and social networks, there is an opportunity for it to have an inefficient, negative impact among young people. The idea of living in militant films, which are broadcast on TV channels and distributed through thousands of videos, social networks, laser discs, which are rented and sold, is promoted. It is a self-evident and open fact that they poison the minds of young people, alienate them from our national-spiritual values, subject to national nihilism and barbarism[8].

Referring to the fact that the ideological immune system against destructive, destructive ideas in young people is still fully formed, very quickly believing in the information they have heard or read, this is a global problem that needs to be paid much attention. It should be noted that through the information in the spirit of the rampant distributed from the internet, it is sometimes possible to achieve even goals that can not be achieved through the evasion of military actions. And such information attacks should not be forgotten that they are aimed at purposefully changing the spiritual, moral, psychological worldview of young people, their political views and beliefs. And one of the main reasons for this is the increasing number of telemarketing, radio, audio, video and multimedia products, data on the internet, computer games that promote aggression, are distributed in different ways. All of them exert pressure on the psyche and psychoemotional state of children and young people, controlling them from Zim, as an effective means of information-psychological interaction.

The media are the most basic, powerful and influential means of ideology, which has a positive and negative impact on the minds of today's youth. Because the mass media serves as a special educator of the masses, organizer of Important Events, an effective tool for solving urgent problems. It is through the media that our national values and universal values, National ideas and democratic principles and ideas of patriotism are promoted and promoted. There is another important aspect of absorbing the idea of national independence and patriotism through the media. In this regard, there is such a statement that shows the power of the mass media in connection with the appropriate response to information terror, ideological threats, the cessation of attempts to subjugate our people morally and the formation of ideological immunity in the citizens of Uzbekistan "if any foul idea is repeated three to four times a week – the "truth" will be ready, people[9].

The fact that information hurdles are often organized in recent times means that the attitude to war has changed, a new type of weapon has been invented. This weapon is information. In the informative battles with the help of such weapons, the consciousness and soul of young people are targeted. Although he is not able to destroy man jismanan like a stray arrow, his brute force, the talophots that he brings is not inferior to any weapons of mass destruction. Because with the help of this weapon, the shots given to the moment confuse the person, motivating him to act contrary to the interests of the series, and the meaning allows him to control the person, to rule over him. In fact, information is also considered the cheapest means of achieving the goal [9]. The fact is that the more work it takes to organize information attacks, the more effort it takes, the more expense it does not require. Although such an ideological expansion does not come about

shootings and bloodshed, the weakening of the understanding of the National continuum will lead to evasion. Modern media, television, computer, Internet, cell phone and other means are changing the nationality, mentality and outlook of people, especially young people. The fact that the developed countries, using these tools, have integrated the consciousness, outlook and lifestyle of the peoples of the world into one form and the "mass culture" that is shaping them into the main strategic policy is evident.

Today, the role and importance of military-patriotic education is increasing in the conditions of global information space dependence, the struggle for the consciousness and soul of a person, especially of the younger generation.

Therefore, the head of State gave instructions to improve the system of military-patriotic education of the population and, first of all, young people, to involve them in the process of reforms carried out in the country, to create conditions for the manifestation of social and creative potential[7].

The tasks set out in the decree of the president of the Republic of Uzbekistan on the training of adolescents in the military-patriotic spirit and additional measures to improve the system of training the reserve of personnel for the Armed Forces and public service of the Republic of Uzbekistan ensure the improvement of the professional competence of the first military.

Due to the military reforms carried out in our country, special attention is paid to the training of highly qualified specialists for the Armed Forces of the country, which have a high moral and moral potential.

It was noted that, on the basis of the strategy of actions of the president for 2017-2021 years, along with other aspects of the country's life, decisions were made in

accordance with the modern requirements of the most important areas of the military sphere, as a result of the implemented systematic and strategic measures, the combat prowess of the National Army [2].

At the meeting, the head of state gave important instructions on the development of the Armed Forces and further strengthening of the country's defense capabilities, as well as the wide application of modern information and communication technologies and advanced innovations in this regard.

The Supreme Commander-in-chief of the Armed Forces for training and professional development of military personnel, as well as for the development of military science, has set the task of in-depth study of military conflicts and modern combat practices, as well as the history of National Military Art, further improvement of the methods and methods of preparation of troops.

The importance of continuing the reforms launched in the system of military education in the, improving the activities of higher military educational institutions, lyceums and colleges, including the military academic lyceums "Temurbeklar school", the national spirit in the hearts of students studying in them, kindness and loyalty to the motherland, comprehensiveness of the sense of Justice, great ancestors, including Jalaliddin Manguberdi, Amir Temur, Shahruh Mirzo, Zahiriddin[7].

Also, instructions were given to transform the complex of the museum "Victory Garden" and "shon-sharaf", restored in Tashkent City, into a scientific center for studying military history and the heroism of great ancestors for servicemen, residents of the country, especially young people.

The task was to educate the population and young people of the country in the military-patriotic spirit, to further accelerate the work related to the formation of their civil position

under the slogan "brave warrior — a model for young people", to otalize at least 10 schools to the commanders of military schools, and by the commanders of the military unit set out in them lessons.

In addition to educating unorganized young people in the military-patriotic spirit, using modern infrastructure created in the Armed Forces, the task was also set to organize work on training them in the labor market in the required professions.

The president also noted that - " a state that has not perfected the spirit of patriotism in its children will not be able to strengthen its defensive capabilities, no matter how powerful the weapon is [1].

In addition, the necessary instructions were given at the meeting to further develop the country's defense industry, improve the system of State Border Protection, increase the effectiveness of work on forecasting and monitoring of emergency situations and Prevention of accidents and technical accidents.

President Shavkat Mirziyoyev noted that the work on improving the moral and moral environment in military families, raising the approaches to a healthy lifestyle and the upbringing of children to an exemplary level, social support and housing of the military and their family members will remain an important and priority direction in the future.

At the end of the event, the head of state noted that the work carried out on the further development of the Armed Forces was the main demand, first of all, for the restoration of a new Uzbekistan aimed at ensuring the security, peace and tranquility of our people.

In the strategy of actions for further development of the Republic of Uzbekistan, such important tasks as "improving the quality and effectiveness of the activities of secondary educational institutions, sovereignty of the constitutional system of the Republic of

Uzbekistan, protection of territorial integrity, strengthening of civil, interethnic and inter-confessional peace and harmony, strengthening the defense capabilities of the state, increasing the fighting power and.

President Of The Republic Of Uzbekistan On February 7, 2017 PF 4947-number Decree of the president of the Republic of Uzbekistan on measures to ensure more effective organization of the process of acquisition of rights over land parcels and other immovable property On August 4, 2018 PQ-3898-number Decree of the president of the Republic of Uzbekistan on measures to ensure more effective organization of the process of acquisition of rights over land parcels and other immovable property as part of the South Caucasus pipeline expansion project more, Cabinet Of Minister's On February 23, 2018, 140-number To a certain extent, this dissertation study will serve in the implementation of the tasks set out in the resolution "on approval of the concept of education of young people in the spirit of military patriotism" and other normative-legal acts related to this activity [2].

It was noted that the role and importance of education in the military-patriotic spirit is growing in the current information space, in the conditions of resistance, struggle for the consciousness and soul of people, especially the younger generation.

Further instructions were given to improve the system of upbringing the population, first of all, young people in such a spirit, to involve them in the process of reforms carried out in our country, to realize their social and creative potential.

– The army may be financially provided with the most modern and necessary means, but its moral weakness, fighting spirit, loyalty and love for the motherland, lack of a sense of responsibility for its fate or indifference can

lead to irreparable consequences, – said the head of our state [7].

Uzbekistan is on the eve of a unique demographic situation with a population under the age of 30, which accounts for 60 percent of the entire population. In the next twenty years, the population, consisting of today's Big children and young people, will become a labor force, which will become the largest labor force in the history of Uzbekistan. With the right investments today, the current youth can become a generation that will raise Uzbekistan to the next level of socio-economic development.

At the same time, the inability to spend money in accordance with the welfare of children and young people of today's age can lead to the inability to ensure the rights of young people and to an increase in the level of unemployment among them. This, in turn, could create a foundation for political and religious extremism and lead to labor migration and at the same time to lose a much more expensive "demographic dividend."

The president and the government of the Republic of Uzbekistan attach priority importance to ensuring that every young citizen has the necessary support and opportunities for full realization of his potential. Improving the state policy on youth is one of the main priorities of Uzbekistan's development strategy for 2017-2021 [8].

In the Republic of Uzbekistan, 60 per cent of the population is young people, and therefore it is very necessary to educate the growing younger generation with a sense of military patriotism, to start a complex work on the present day from the family, because the first concept and education are given to the child by parents, and in the next place are educational.

In order to raise the feeling of military patriotism in young people, initially it is necessary to convey in the family our national

values, the life of the great sakardas in national history in the spirit of the highest national spirit, and to read books in the circle of our patriot ancestors in an interesting way, shows its positive result.

In order to improve the professional competence of the primary military officer by educating the sense of patriotism in the student, it is necessary to organize training excursions to military units, which are subordinated to the Ministry of Defense in schools, lyceums and technical schools every month, in order to further educate the students, it is necessary to involve in the training of young.

As well as examining the social situation of the servicemen who are serving on the basis of openness and transparency, and examining the social situation of the servicemen who are serving on the basis of openness and transparency, and the need to introduce into the state the families of the servicemen whose social status is difficult to conduct material or spiritual. Because everyone who serves in the composition of the Ministry of Defense, the Ministry of internal affairs, the Ministry of emergency situations, the State Security Service, the National Guard, whether it is a serviceman or an employee, is an ordinary person, but not everyone can be a military servant. The military serviceman, who gladly worked in the mood of consent in his work, achieves many successes, and with love for his profession, the first military officer, by educating his children a sense of patriotism, becomes the impetus for the improvement of professional competence. By nurturing the sense of patriotism in the student, the Initial Military Office in the improvement of professional competence, the equal distribution of the currently serving military personnel after studying the workloads provides the ground for the continuation of the father's profession in the family of the child.

After Uzbekistan gained independence, there was an opportunity to modernize the national system of Personnel Training, carry out targeted work on the introduction of modern innovative technologies in the educational process of specialized lyceums.

The Constitution of the Republic of Uzbekistan, the doctrine of Defense and the reform of the armed forces contribute to the purposeful implementation of measures for the modernization of the Army, special attention is paid to Specialized Military lyceums, after all, their graduates have the opportunity to study in higher military educational institutions in the future.

In the latter years, studies aimed at determining the importance of the physical training of schoolchildren indicate that they have gained a great deal of experience in this regard, it has allowed to determine the general characteristics of the issues that are being set up with the aim of solving the tasks set forth.

The ideas of national independence in our country, the use in the process of education and military patriotism as an important component of social life, should serve the interests of an updated society. This process begins with the creation of the legal framework of state policy in the field of Education. Raising military patriotism to a higher rank on the basis of ideas of independence is a period talabi, a social task of society.

The future of any society depends on what kind of education the younger generation receives and how it is brought up. The generation that has received such education has the right to perform such a high task as to protect the Motherland, which is of universal importance before the country.

In conclusion, the reform of the Armed Forces and the training of professional military personnel, as well as educating the sense of patriotism in the students who choose the future

military profession, the need to improve the professional competence of the first Military Office is dictated by the political, socio-economic situation in the country and the emergence of the geostrategic situation in the. The main need to reform the sphere of training the contestants of the future military service in the defense system of the Republic consists in the formation and development of an interactive system serving military patriotism in the educational system. Continues [5].

In order to ensure active and consistent implementation of the state policy aimed at the creation of a system of upbringing of healthy and spiritually mature younger generation, which has a high potential, modern thinking and world outlook, which is ready to selflessly defend the interests and sovereignty of our state:

1. The establishment of principled new military-academic lyceums "Temurbeklar school" in the Ministry of Defense, Internal Affairs, Emergency Situations, State Security Service, National Guard of the Republic of Uzbekistan is an important reform in this regard.

It is also important to carry out the following reforms in the area, as a number of problems will go:

-the presence of democratic principles in the civil society, which is formed in Uzbekistan, its strengthening is an important factor in ensuring our national security by improving the professional competence of the first Military Office, the formation of their ideological spiritual and political-legal culture by educating the student a sense of patriotism;

- the ideology of independence enriches the spiritual world of students and increases their social activity;

- in-depth study of the socio-humanitarian Sciences in improving the professional competence of the first military office by educating the sense of patriotism in the student

plays an important role in the development of political, legal, spiritual and aesthetic culture, professional quality and qualities;

- improving the activity of state and public organizations will further strengthen the attitude of young people and the population to the professional army, increase their desire to volunteer service.

- the development of military education in the Armed Forces system requires the creation of new methods and means of professional education to improve the skills of pedagogical personnel;

-enrich the libraries of schools, lyceums, technical schools and military units with educational-methodical and spiritual-educational literature, form the political culture and mentality of servicemen and teach them to think extensively.

- Analysis of the theoretical and methodological basis for improving the professional competence of future servicemen and officers in the field of Education has shown that in today's education system, the stabilization and globalisation tendencies are conditioned on improving the quality of military education on the basis of modern approaches.

- the determination of strategies for improving and managing the Initial Military Office Professional Competence by educating the student a sense of patriotism indicates that the development of a model of compensation based on the qualification requirements for the content and quality of their professional competence in the conditions of modernization of education is one of the effective approaches;

- since the qualification characteristic of the graduate of the educational institution does not correspond to modern requirements, in a number of advanced foreign countries it is necessary to switch to the "model of improvement of the first Military Office Professional Competence by educating the sense

of patriotism in the pupil". This, in turn, became the basis for the creation of the "model of improving the professional competence of the first military officer by educating the sense of patriotism in the pupil", which consists of four groups of base competences, connected and interacting with each other by the future military officer and Officer.

- the implementation of the creative technology structure aimed at improving the professional competence of future officers in the field of education, the stratification of educational programs based on the level of professional competence on the basis of the development of modern educational technologies and innovation approaches, the takalification of alternative forms and professional competence was based on the scientific and theoretical framework based on the.

- the model of improving the professional competence of the first military officer by educating the feeling of patriotism in the student will help to determine the high, medium, low levels of improvement of professional competence in the future military personnel and officers by identifying the base competences of the future military personnel and officers in the field of Professional Competence Development.
