ABSTRACT:

The findings of this research have important implications for classroom teachers, curriculum developers, and politicians who are interested in improving language learning using online resources. Better digital learning experiences may be designed if stakeholders have a deeper appreciation for the various ways in which e-learning might affect learners' perspectives on listening and speaking. This study adds to the ongoing discussion about the role of technology in the classroom and how it might disrupt established methods of language learning. Over a period of time it is found that different sectors of economy have changed including education sector. Unlike any other sector, education sector has seen many evolution and changes. Education system changed from to class room teaching, then teaching with the help of projectors or LED and now its online teaching classes or teaching through E-Learning portals or Web Based E-Learning (WBEL). It has been seen from the past several years that online education system or ELearning system has emerged as a powerful contender for new education system. From the recent past it has been found that several online courses have been conducted to educate millions of people around the globe on various topics. In spite of difference in culture and language and diverse population E-Learning system has gained a lot of popularity increase in affordability and purchasing power of Indians. The only reason for growth in ELearning system is drastic change in information technology and technological improvements. This article aimed at examining the impact of E-Learning or Web Based ELearning (WBEL) in modern India Education System.

KEYWORDS: Education, E-Learning, Web Based E-Learning (WBEL), Information Technology, Purchasing Power, Education System.

INTRODUCTION

The quality of education provided in schools must be prioritized if students are to graduate with marketable skills. If educators want to raise student achievement, they must use creative methods. Quality in education may be improved via the use of digital learning. We need instruction that is both student-focused and skill-based. The student must take an active role in his or her education. At recent years, e-learning and blended

learning have become more commonplace at India's institutions of higher learning. Where, when, and how online and blended learning may be most useful in the classroom setting is an important question to answer. Each student should care about and make an effort to follow along with the lesson being presented by the teacher. Attitude and interest, two psychological elements, are crucial to successful learning. Students' current skill levels are the most important factor in determining

the effectiveness of online and hybrid learning. When students believe in their own intelligence and adopt an optimistic perspective, they are more likely to do well in language classes. This descriptive survey looks at how utilizing e-learning affects students' mindsets and motivations when studying a foreign language.

ENGLISH EDUCATION IN INDIA

Education in ancient India was primarily valued by a limited segment of the Indian population. Universal education was provided to all individuals. However, only those with strong memory capabilities and a genuine enthusiasm for acquiring knowledge were granted permission.

In the lack of written documentation, educational institutions in India developed a notable and efficient method of transmitting information to future generations via the use of hymns. A significant portion of the population continued to lack access to formal education and were therefore unable to get a formal education. The language used in this context was Sanskrit. In ancient India, the transmission of knowledge occurred mostly via oral means, wherein information was verbally conveyed from one generation to the next. Women were granted equal rights to access school and pursue careers in teaching.

Significant emphasis was placed on Ancient Indian philosophy and the Vedic texts. The intended purpose of the subject in question was to serve as a remarkable illustration of society stratification and the systematic implementation of regulations. The text included several disciplines of human understanding, including almost all facets of existence, including phonetics, arts, literature, medicine, law, philosophy,

astrology, and astronomy. The text discusses several aspects related to maintaining good health, avoiding societal vices, enhancing focus, and adhering to ethical principles, all of which remain pertinent in contemporary times. By using logical reasoning and dispelling ignorance, individuals may get a comprehensive appreciation for the profound significance of the Vedic literature. According to Latasinha (2010), an individual with expertise in the subject matter has the ability to identify valuable and significant information from a vast pool of knowledge, which in turn has the potential to instigate transformative effects inside the education system.

During the latter half of the nineteenth and early twentieth centuries, Swami Vivekananda, the Rama Krishna Mission, and the Theosophical Society of India endeavored to acquaint the Western world with the allure and elegance of the ancient repository of knowledge that had not only captivated Indians but also foreigners. Scholars from several nations undertook the task of translating these texts into their own languages and afterwards reinterpreted them via a reasonable lens. As India transitioned from the ancient to medieval period, there was a noticeable decline in the quality of its education system. The decline of the old education system may be attributed to a multitude of circumstances.

Advantages of e-learning:

Out of the several advantages, one of the most important advantage is that with the use of ELearning, user can access E-Learning portal at any time and according to their comfort. It can also be accessed from any browser or on any platform or

device. Flexibility of time and place make E-Learning portal and services more popular amongst youth and professionals. One of the main advantages is that updated information can be accessed from any part of the world only with the help of internet. Even user from remotest part of the world can access and learn updated learning material through E-Learning portals. Its provides great advantages to working Professionals by providing flexibility in learning. Many certification courses are easily available which are earlier not possible with travelling from one place to other.

Disadvantages of e-learning:

Beside many advantages, there are some disadvantages of E-Learning are also there, one of them is Limited Internet connection. In a country like India, connection of internet is limited in respect of geographical expansion. There are many remote areas of India where there is no internet connection as well as there are many places where there is slow or limited connections and speed. Low connection, slow downloading and uploading speed, bad quality of audio and video are some of the big problems of E-Learning services in India. As E-Learning portals are static in nature, limited interactions between educator and learner is often leads to great disadvantages of E-Learning portal. People also resist changing from traditional way of learning to Web Based Learning. E-Learning portals and providers find it difficult to reach end users as it is difficult to convince users to deliver their E-Learning access. Not all courses could be delivered through Web Portal as some topics or courses require more personal attention and touch. Many E-Learning

courses are out-dated as they were developed 10 years back and required regular update according to changing environment. It requires improvements from time to time.

Current state of e-learning in India:

Due to new-start-ups, new technology and higher internet speed and availability of smartphones, the dimension of online learning is growing manifold. Government of India is also making endless efforts to provide access to online learning available to students in every corner of the country. Low internet tariff, cheap mobile phones and easily availability of SIM cards provides stimulus to the effort of government. Today in India we have online courses from primary level to professional level. Large number of training institutes and start-ups companies are provide wide variety of services in E-Learning. many service providers are providing video lectures along with study material. Where as many focuses on providing access to subjects anytime and anywhere through convenience based training and learning system. Another reason for growth of E-Learning in India is requirement to update in skill and knowledge. For example a software professional having experience of 10 years, also is in needs to update his or her skill in the field of programming language, data analytics, cloud computing etc. Increment in salary, promotion, better working condition also insists people to update their skill and knowledge and this can be achieved only with the help of E-Learning resources. In India, lot of start-ups are already setting their business in the field of E-Learning or online learning. Many start-ups like Learn Social,

Simplilearn and Intellipaat are playing a role of aggregator and aiming mid-level professionals to provide them access to E-Learning resources. Simplilearn, the Bengaluru based start-up is currently providing near about 200 certification courses in the field of Quality Management, Financial Management, Project Management, Information Technology etc. the company has trained over 2,25,000 professionals across the globe.

Challenges faced by e-learning in India:

From last 50 years, Government of India is providing immense support and funds to make India, world's largest system of Education. In attaining this objective government is facing many challenges. Unable to maintain high standard of education, slow pace of growth of technology and knowledge, awareness amongst people, rigid bureaucracy are some of the constrains of development in E-Learning. Creating awareness amongst people staying in rural parts of country, lack of infrastructure, poor availability and connectivity of internet is a major challenge in development of E-Learning system in India. Difference in culture, gender, religion and level of literacy is one of the major challenges faced by E-Learning providers. Due to religious or spiritual difference, some contents, although important for courses, may sometime unacceptable with certain sections of the society. Geographical difference creates major challenges especially in Live Classes because of difference in time zone.

Future of e-learning in India:

As far as E-Learning industry is concerned, India has major role to play at

International level. Presence of worlds one of the best training professionals and educational infrastructure, makes India, world's best E-Learning provider. As India is already a leader in IT Industry, the future of E-Learning portal is bright. Through regulation and financial support, Government of India is taking every measure to boost E-Learning environment in India. Not only government but many private sector participants are also taking every step to provide pace to E-Learning system in India. All these measure and steps make India as attractive destination for E-Learning industry. Many foreign companies are planning to setup their business of E-Learning system in India.

CONCLUSION:

From the above study, conclusion regarding Impact and development of online Education (E-Learning) system in India are as follows:

- The future of Education in coming period is E-Learning or web-based learning system.
- It is boon to the society as it could be accessed by every section of the society.
- Government needs to expand the scope of online education and should create awareness amongst different segment of the society.
- E-Learning is not only beneficial for students but also helpful for teachers and professionals to upgrade their knowledge and skills.
- In a country like India, where there are diversification in language, religion, age and knowledge, one needs to focus on marketing of E-Learning system. More marketing will create new customers for E-Learning Providers.

- Vast expansion of internet, mobile phone and other electronic gadget users, we can say that traditional learning system can be replaced by E-Learning system in near future.
- In a country like India, level of economic development, education and literacy can be achieved with the help of expansion of E-Learning system.
- Not only to students, teachers, professionals but online education will also provide diversified opportunity to corporates to expand their business opportunities.
